

Introduction

CCMC Mission Statement

The CCMC is a multi-agency partnership to enable, support and perform the research and development for next-generation space science and space weather models.

- NASA's CCMC resources support a variety of activities in the US and international space science and engineering communities including
 - Access to sophisticated space science models
 - Access to space weather data and models
 - Applied science support, engineering tools, and program support

CCMC Mission Statement

The CCMC is a multi-agency partnership to enable, support and perform the research and development for next-generation space science and space weather models.

- NASA's CCMC resources support a variety of activities in the US and international space science and engineering communities including
 - Access to sophisticated space science models
 - Access to space weather data and models
 - Applied science support, engineering tools, and program support
- NASA Technical Fellows and their Technical Discipline Teams (TDT) provide expertise to NASA in support of the engineering disciplines required to design, build and operate space systems
 - Tech Fellows are assigned to NASA's Engineering and Safety Center (NESC)
 - NESC reports to Office of the Chief Engineer
 - Advisory role to senior NASA management on technical engineering discipline issues that impact Agency programs

Introduction

CCMC Mission Statement

The CCMC is a multi-agency partnership to enable, support and perform the research and development for next-generation space science and space weather models.

- NASA's CCMC resources support a variety of activities in the US and international space science and engineering communities including
 - Access to sophisticated space science models
 - Access to space weather data and models
 - Applied science support, engineering tools, and program support
- NASA Technical Fellows and their Technical Discipline Teams (TDT) provide expertise to NASA in support of the engineering disciplines required to design, build and operate space systems
 - Tech Fellows are assigned to NASA's Engineering and Safety Center (NESC)
 - NESC reports to Office of the Chief Engineer
 - Advisory role to senior NASA management on technical engineering discipline issues that impact Agency programs
- My comments today will focus on
 - Tech Fellow for Space Weather activities of general interest to the CCMC community
 - Space Environments TDT activities supported by the CCMC

Technical Assessment and Support Activities

- CCMC personnel experienced in space physics research and space weather monitoring are a valuable resource for NESC technical assessment activities related to space environments and effects
- The Space Environments TDT currently has ten teams working on a variety of NESC funded space environment activities including
 - James Webb Space Telescope Space Environment Launch Constraints
 - Chandra X-Ray Observatory ACE Real-Time Solar Wind
 - ISS Plasma Interaction Model Independent Review
 - CubeSat Radiation Environments and ISS Dose Data
 - Southern Hemisphere Meteoroid Environment Measurements
 - Space Weather Architecture
 - NOVICE Support to Launch Services Program and Commercial Crew Program Radiation
 Assessment
 - Europa Lander Radiation Test Technical Support
 - DSCOVR Pulse Height Analyzer Data Analysis
 - Auroral Charging Threat Assessment

CCMC supported activities

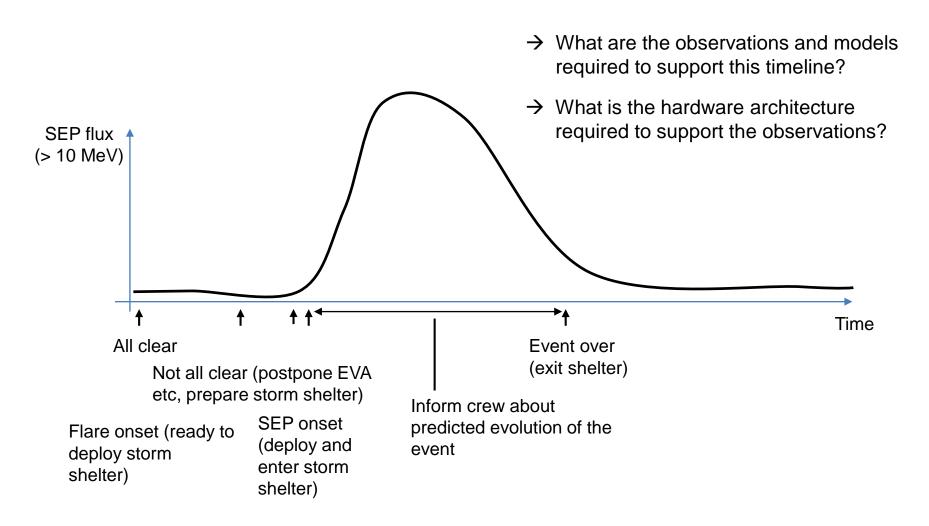

Space Weather Architecture Technical Assessment

- NESC is conducting an independent technical assessment of space environment monitoring and forecasting architecture options to support human and robotic deep space exploration
 - Antti Pulkkinen/CCMC brought the request for the study to the NESC
 - William Gerstenmaier, Associate Administrator for HEOMD serving as the primary stakeholder for the study
 - Evaluate near-real time monitoring assets, space radiation analysis tools, and forecast methods to support human exploration of the Moon and Mars
 - FY18 activity with final report due to NESC and stakeholder by the end of the fiscal year
- Assessment organized into six interconnect tasks:
 - Review of historical reports and documentation relevant to space weather monitoring
 - Assessment of operational response time for space weather monitoring
 - Review of relevant forecasting tools
 - Assessment of solar energetic particle operational alert threshold levels for exploration missions
 - Develop of space weather architectures
 - Space weather architecture cost estimates
- Team includes personnel from
 - NASA Centers (GSFC, JPL, JSC, LaRC, MSFC) and HQ
 - NOAA Space Weather Prediction Center
 - Air Force Research Laboratory

Con ops timeline

NASA Program Support

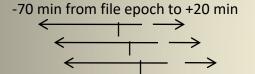

- CCMC provides both mission science and space weather support through its Runs on Request service, and also through real-time runs and data viewable via webpages and the integrated Space Weather Analysis system (<u>iSWA</u>, <u>iSWA catalog</u> <u>description</u>, <u>API access</u>).
- CCMC also provides a <u>searchable database (DONKI</u>, <u>API access</u>) of space weather events, simulations, and notifications.
- NASA and international mission support
 - Geocentric missions: RHESSI, IRIS, ISS, CALIPSO, Terra, AURA, AQUA, TRMM, FASTSAT, EOS, SDO,
 Chandra, MMS, Van Allen Probes, THEMIS
 - Near-Earth missions: ACE, SOHO, Wind, JWST
 - Heliospheric missions: MESSENGER, STEREO, Spitzer Space Telescope, MAVEN, MSL, Dawn, Kepler,
 EPOXI, Juno, CASSINI, New Horizons, Voyager
 - Sounding rockets: Grand Challenge Sounding Rocket Campaign, STORM, VISIONS, VISIONS-2
 - International: SOTERIA, Venus

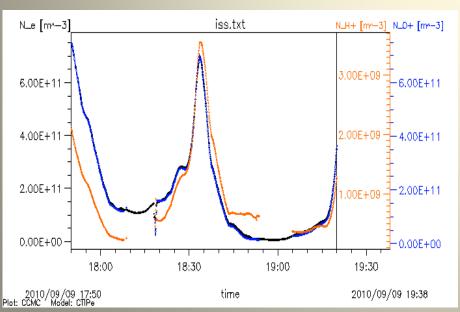

CCMC Real-time Ionosphere Ne, Te for ISS

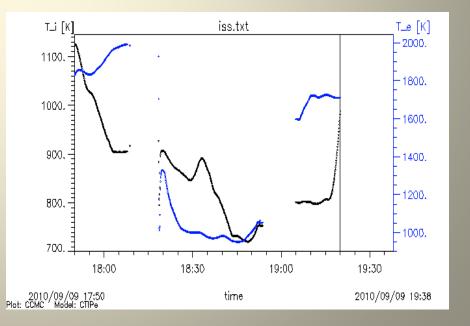

Coupled Thermosphere Ionosphere Plasmasphere Electrodynamics (CTIPe) Model

- CCMC implemented real time CTIPe model in spring 2010 (CTIPe_RT) with output specific for ISS orbit
- ISS ephemeris from GSFC/SSCWeb
- New record every 10 minutes gives
 90 minutes of data at 5 sec time steps

ISS EVA Space Weather Support

- ISS FPMU measurements of Ne, Te obtained days to weeks in advance of an EVA are used for an assessment of spacecraft charging risks to crew during EVA assuming persistence of conditions
- Space weather is monitored for Earth directed fast CME's and high speed solar wind conditions that may invalidate the persistence of condition assumptions if they exceed a speed threshold
- CCMC Earth directed CME alerts are now the primary source of CME initial speed data since SWRC is the only space weather monitoring organization regularly providing this information on a reliable basis

NASA Goddard Space Flight Center, Space Weather Research Center (SWRC)

Message Type: Space Weather Notification - CME (Missions Near Earth) ## ## Message Issue Date: 2015-03-15T19:20:25Z

Message ID: 20150315-AL-001

Disclaimer: NOAA's Space Weather Prediction Center (http://swpc.noaa.gov) is the United States Government official source for space weather forecasts. This "Experimental Research Information" consists of preliminary NASA research products and should be interpreted and used accordingly.

Summary:

C-type CME detected by SOHO.

Start time of the event: 2015-03-15T02:00Z.

Estimated speed: ~750 km/s.

Estimated opening half-angle: 45 deg.

Direction (lon./lat.): 32/-12 in Heliocentric Earth Equatorial coordinates (see [1] in Notes).

Activity ID: 2015-03-15T02:00:00-CME-001

Based on preliminary heliospheric modeling carried out at NASA GSFC Space Weather Research Center, it is estimated that this CME may impact NASA missions near Earth. Simulations indicate that the leading edge of the CME will reach NASA missions near Earth at about 2015-03-17T11:39Z (plus minus 7 hours). The roughly estimated expected range of the maximum Kp index is 5-7 (minor to strong).

Notes:

This CME event (2015-03-15T02:00:00-CME-001) is associated with C9.1 flare with ID 2015-03-15T01:15:00-FLR-001 which peaked at 2015-03-15T02:13Z.

SCORE CME typification system:

S-type: CMEs with speeds less than 500 km/s

C-type: Common 500-999 km/s
O-type: Occasional 1000-1999 km/s
R-type: Rare 2000-2999 km/s
ER-type: Extremely Rare >3000 km/s
http://swrc.gsfc.nasa.gov/main/score

September 2017 Geomagnetic Storm

- ISS FPMU downlink started 5 September at 18:28 with requests to operating into mid-September based on CCMC CME alerts
- FPMU data used for investigation of ionosphere response to geomagnetic storms and auroral charging of ISS
